

Double-wall Storage Tanks from

Metal Products Company

Horizontal, vertical, cylindrical and rectangular designs to meet the needs of your facility.

All double-wall designs offer integral, impermeable secondary containment.

Primary and secondary containment compatible with a wide range of fuels.

Interstitial leak detection capability.

Built and labeled to UL142 standards.

Capacities to 40,000 gallons.

360° secondary containment.

Multiple compartments can be provided.

Internal secondary monitor tube for added security.

Wide variety of UL approved support saddles or skids.

Metal Product's double-wall aboveground storage tanks offer a tremendous alternative to standard single-wall designs requiring external diking and containment basins.
